

I use Satellite radio exclusively. I do not own an FM/AM radio and drive a truck to and from Atlanta 5 - 6 days a week. I have been waiting for the traffic and weather channel for Atlanta to go on the air to help me navigate the traffic that I run into every day in Atlanta. This will be a vital asset to me in my travels. If the commercial radio stations don't want satellite to have this maybe they should first stop the cities from posting warnings on the electric signs on the expressways. It is the same difference. I pay for radio because I can get what I want when I want. Commercial radio only broadcasts traffic at peak periods. When there is an accident in Atlanta at 3AM there is no one to inform me about the situation. But satellite radio will be there for me to avoid being part of the problem. Thank you
